LAB ASSIGNMENT 3 — PAGE ELEMENTS

Hotel Booking Command Center | Assignment 03

Student	Sam Devaraja J.
Register Number	240701463
Department	Computer Science and Engineering
Platform	Zoho Creator

1. Aim

To create one internal Zoho Creator command-centre page using the eleven specified Page Builder elements for front-office monitoring, booking processing and reference access.

2. Required Page

Page name: **Hotel_Command_Center_Page**
Main panel: **Command_Center_Main_Panel**

3. Eleven Page Builder Elements

• Panel — Command_Center_Main_Panel

• Board — Booking_Status_Board

• Chart — RoomType_Popularity_Chart_Widget

• Gauge — Occupancy_Rate_Gauge

• Search — Guest_Search_Bar

• Form — Quick_Walkin_Booking_Form

• Report — Full_Bookings_Report

• Snippets — Hotel_Policy_Snippet

• Button — Send_Checkin_Reminder_Button

• Widgets — Housekeeping_And_Arrivals_Widgets

• Viewer — Guest_ID_Document_Viewer

4. Required Page Layout

• Overview Strip: occupancy gauge, room-type popularity chart and guest search.

• Processing Workspace: check-in reminder button and booking status board.

• Detailed Data: full bookings report.

• Reference & Quick Actions sidebar: hotel policy snippet, guest ID viewer and quick walk-in booking form.

• Operations Strip: housekeeping and arrivals/departures widgets.

5. Configuration

• Restrict page visibility to front-office and manager users.

• Board stages: Enquiry, Confirmed, Checked-In and Checked-Out; movement updates Status.

• Chart displays booking count by room type and refreshes automatically.

• Search covers guest name, contact number and Booking ID.

• Embedded walk-in form uses the same booking form validations.

• Report export is restricted to manager-level users.

• Viewer displays the uploaded ID proof.

6. Procedure and Expected Result

Create one page, add the eleven elements, connect them to the existing booking form and reports, then test search, board status movement, embedded form, report and document viewer.

Completion/evidence status: The supplied screenshot shows a summary page with KPI values, a room-type chart, meal-plan counts and an embedded booking report. It does not demonstrate all eleven specified Page Builder elements or role-based access, so full page-element completion is not established by this screenshot.

Screenshot Evidence

Figure 1. Current application page screenshot. It shows summary values, room-type distribution, meal-plan counts and the booking report area.
