LAB ASSIGNMENT 5 — WORKFLOWS

Hotel Booking Automation Suite | Assignment 03

Student	Sam Devaraja J.
Register Number	240701463
Department	Computer Science and Engineering
Platform	Zoho Creator

1. Aim

To configure eight Zoho Creator workflow options for booking confirmation, reminders, approval, payment, lifecycle control, batch feedback, report recalculation and invoice generation.

2. Eight Required Workflow Options

• Form Workflow — On_Booking_Submit_Workflow: send booking confirmation to guest and notify front office on new submission.

• Schedule — Daily_Checkin_Reminder_Schedule: daily at 6:00 PM; find tomorrow's arrivals and send reminders.

• Approval — Complimentary_Upgrade_Approval: manager approval for complimentary upgrades or special discounts.

• Payments — Booking_Advance_Payment_Workflow: generate payment link and update payment status and transaction reference.

• Blueprint — Booking_Lifecycle_Blueprint: Enquiry → Confirmed → Checked-In → Checked-Out with role-based transitions and comments.

• Batch Workflow — Bulk_Feedback_Request_Batch: nightly at 11:00 PM; process same-day check-outs in batches of 100 and send feedback requests.

• Report Workflow — OnEdit_Recalculate_Balance_Workflow: recalculate Total_Amount_Payable after tariff or discount edits.

• Function — Generate_Invoice_Function: generate invoice PDF and email it on checkout or manual resend.

3. Screenshots and Observed Configuration

The workflow overview screenshot shows five named workflows: Inventory Update Process, Auto-calculate Total Amount, Daily Room Availability Check, Send Booking Confirmation Email, and Validate Airport Pickup Logic. Separate screenshots show Deluge code for booking confirmation email, amount calculation, airport-pickup validation and a scheduled maintenance alert.

4. Procedure and Expected Result

Configure each workflow against Room_Booking_Form or the appropriate report. Test each trigger independently. Verify email recipients, schedule time, approval routing, payment connection, blueprint transitions, batch selection, report edit trigger and invoice output.

Completion/evidence status: The supplied screenshots demonstrate several configured workflows and Deluge scripts. They do not establish all eight required workflow options. In particular, approval, payment gateway, blueprint, batch workflow, report workflow and invoice function require separate configuration and testing evidence.

Screenshot Evidence

Figure 1. Workflow overview in Zoho Creator. Five workflow entries are visible in the application.

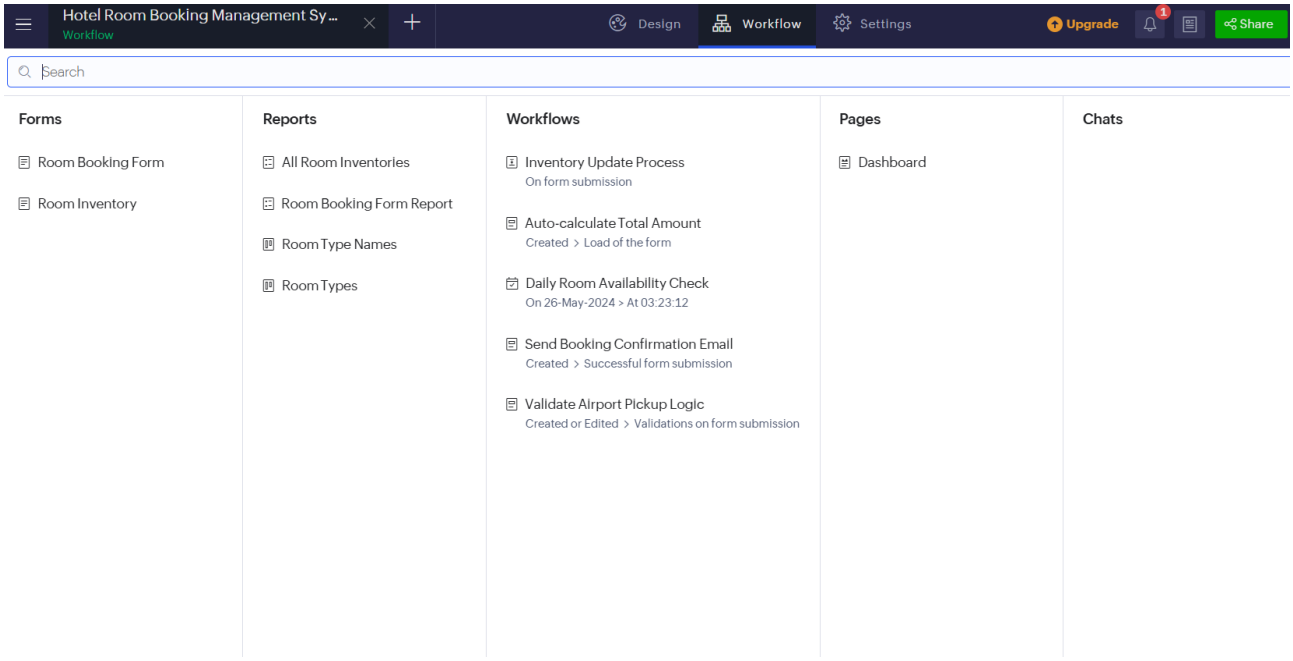

Figure 2. Deluge editor for Send Booking Confirmation Email.

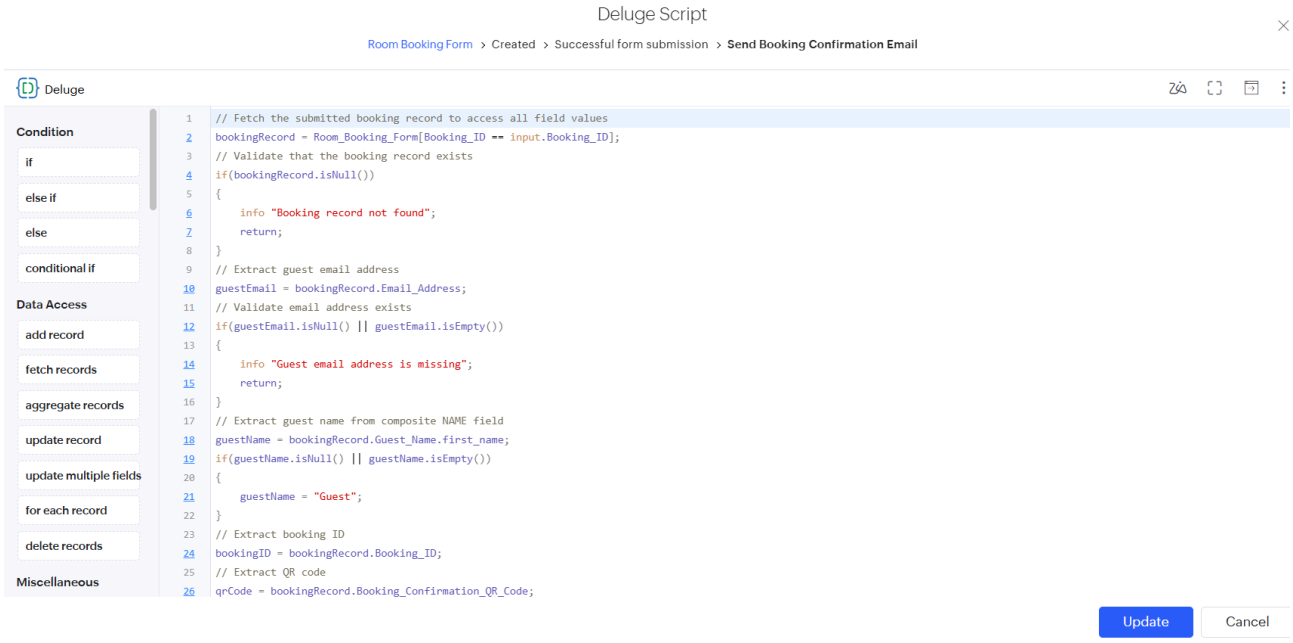

Figure 3. Deluge editor for Auto-calculate Total Amount.

Figure 4. Deluge validation for airport pickup distance.

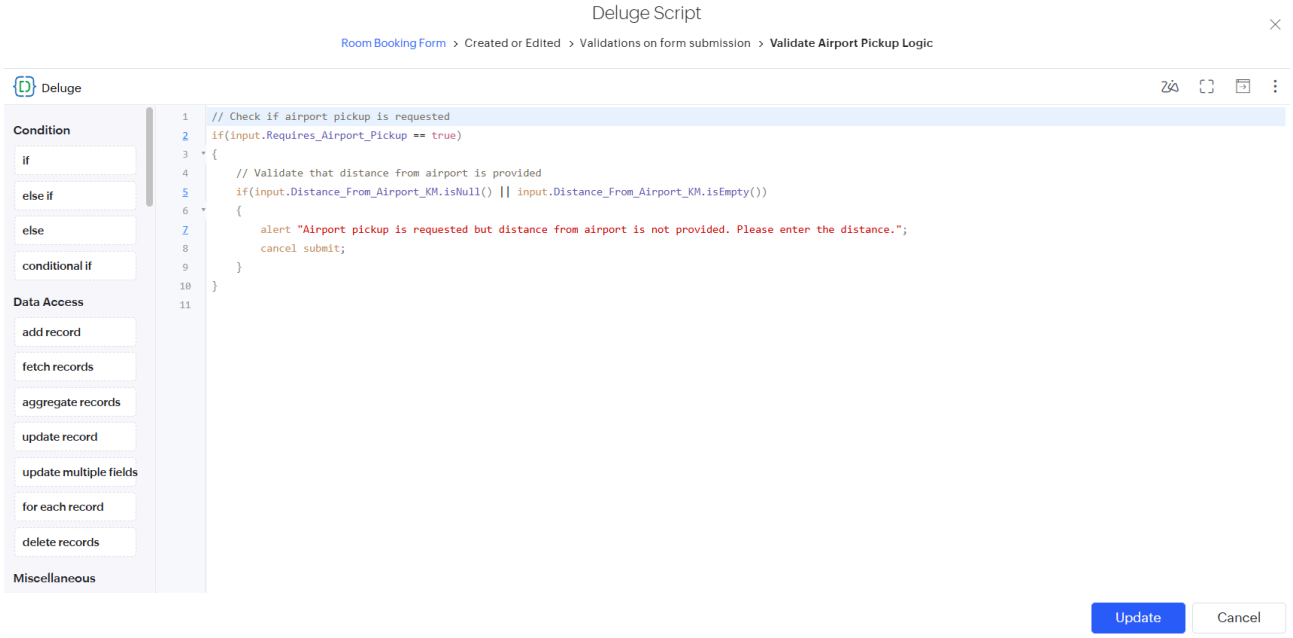

Figure 5. Deluge editor for Daily Room Availability Check / maintenance notification schedule.
