Assignment – 03

Hotel Room Booking Form — Basic Fields Use Case

1. Objective

To design and build a functional "Hotel Room Booking Form" application in Zoho Creator that demonstrates the correct usage of all thirteen Basic Fields available in the Form Builder, while solving a real hospitality-industry requirement of collecting and pre-processing room booking requests.

2. Problem Statement

A budget hotel currently accepts room bookings through phone calls and third-party messaging apps, resulting in double bookings, missed special requests, and no structured way to know guest count, room preferences, or arrival schedule in advance. The front desk has no digital record until the guest actually checks in.

Design a low-code application using Zoho Creator that allows a guest to submit a room booking request through a single online form. The form must capture guest identity, contact details, identification details, room and stay preferences, amenities required, and acknowledgement of hotel policies — using every Basic Field type provided by Zoho Creator's Form Builder.

3. Scope of the Use Case

- Application Name: Hotel Room Booking & Front Office Management
- Form Name: Room_Booking_Form
- Primary Users: Guests / Hotel Front Office staff
- Report View: Room_Booking_Report (list of all submitted booking requests)
- Objective of the Report: Enable the front office to filter, confirm availability, and prepare rooms ahead of guest arrival

4. Basic Fields Used and Their Mapping

The table below maps every Basic Field from the Zoho Creator Form Builder palette to its role in the Hotel Room Booking Form.

Basic Field	Form Field Name	Purpose	Sample Value
Name	Guest_Name	Captures the full name of the guest using First/Last name sub-fields	Anitha Selvam
Email	Email_Address	Captures a validated email address for sending the booking confirmation	anitha.selvam@example.com
Address	Permanent_Address	Captures the guest's permanent residential address for records and billing	31, Park Road, Coimbatore, TN, 641002

Basic Field	Form Field Name	Purpose	Sample Value
Phone	Contact_Number	Captures a validated mobile number for the front desk to confirm and coordinate the booking	+91 99000 44556
Single Line	ID_Proof_Number	Captures a short free-text entry for the guest's identification document number	Aadhaar: 1234 5678 9012
Multi Line	Special_Requests	Captures free-text remarks for any special requirements during the stay	Requesting a room on a higher floor, away from the elevator, with an early check-in if possible.
Number	Number_Of_Guests	Captures a numeric value with validation for the total number of guests staying	3
Date	Check_In_Date	Captures the guest's intended check-in date using a date picker	02-Aug-2026
Time	Preferred_Checkin_Time	Captures the guest's expected arrival time at the hotel	1:00 PM
Drop Down	Room_Type	Presents a single-select list of room categories available at the hotel	Deluxe Double Room
Radio	Meal_Plan	Captures a single mandatory selection among mutually exclusive meal plan options	Breakfast Included
Multi Select	Amenities_Required	Allows selection of one or more additional amenities requested for the stay	Extra Bed, Airport Pickup, Late Checkout
Checkbox	Agree_To_Hotel_Policies	Captures the guest's acknowledgement of the hotel's check-in/check-out and cancellation policies	Checked (Agreed)

5. Form Layout (Section-wise)

Section A — Guest Details

- Guest Name (First Name, Last Name)
- ID Proof Number (Single Line)
- Number of Guests (Number field)

Section B — Contact Details

- Email Address (Email field)
- Contact Number (Phone field)
- Permanent Address (Address field)

Section C — Room & Stay Preferences

- Room Type (Drop Down)
- Meal Plan (Radio: Room Only / Breakfast Included / All Meals Included)
- Amenities Required (Multi Select)
- Special Requests (Multi Line)

Section D — Scheduling & Policy Acknowledgement

- Check-In Date (Date field)
- Preferred Check-in Time (Time field)
- I agree to the hotel's policies and cancellation terms (Checkbox)

6. Validation Rules to Configure

- Guest Name, Phone, ID Proof Number, Number of Guests, Room Type, Check-In Date, and Policy Checkbox are mandatory fields.
- Email field: built-in email format validation enabled.
- Phone field: country code format enabled for Indian numbers.
- Number field (Number of Guests): restrict value range from 1 to 6 per room.
- Date field: restrict Check-In Date to disallow past dates.
- Checkbox (Hotel Policies): form cannot be submitted unless checked.

7. Workflow Summary

- Step 1: Guest opens the public form link shared on the hotel's website or booking confirmation SMS.
- Step 2: Guest fills in personal, identification, room preference, and scheduling details across the four sections.
- Step 3: On clicking Submit, Zoho Creator validates all mandatory fields and formats.
- Step 4: A new record is created in the Room_Booking_Report.
- Step 5: An automated confirmation email (using the Email field value) is triggered to the guest once availability is verified.
- Step 6: The front office reviews the report, filters by Room Type and Check-In Date, and prepares the room and amenities ahead of the guest's Preferred Check-in Time.

8. Expected Learning Outcomes

- Understand the purpose and correct use case for each Basic Field in Zoho Creator.
- Learn how to structure a hospitality booking form into logical, guest-friendly sections.
- Practice configuring field-level validations (mandatory, format, and range checks).
- Understand how form field values feed into report views and front-office scheduling workflows.

9. Deliverable for This Lab Exercise

Students must build the Room_Booking_Form in Zoho Creator exactly as specified above, apply the listed validations, generate the Room_Booking_Report, and submit a screenshot-based lab record showing: (a) the form in Form Builder with all 13 fields, (b) a live preview of the form, and (c) at least three sample submitted records in the report view.
