Assignment – 03

Hotel Room Booking Reports Suite — Report Types Use Case

1. Objective

To design and build a complete suite of Reports in Zoho Creator for the existing "Hotel Room Booking Form" application, demonstrating the correct usage of all nine Report Types available in Zoho Creator — List View, Spreadsheet View, Kanban View, Calendar View, Map View, Timeline View, Pivot Table, Chart View, and Summary View — so that the hotel's front office and management can view, analyze, and act on booking data from multiple perspectives.

2. Problem Statement

The Hotel Room Booking Form captures rich guest and stay data, but a single default list of records cannot serve every stakeholder's needs. The front office needs a quick way to update check-in and housekeeping status in bulk, the manager needs to see how many guests are arriving on a given day, marketing needs to see where guests are coming from geographically, and ownership needs summarized revenue and trend charts to plan staffing and promotions. Design a complete set of Reports on top of the Room_Booking_Form in Zoho Creator, using every Report Type Zoho Creator provides, so that each stakeholder group has a purpose-built view suited to how they need to consume the booking data.

3. Scope of the Use Case

- Application Name: Hotel Room Booking & Front Office Management
- Base Form: Room_Booking_Form
- Primary Users: Hotel Owner/Manager, Front Office, Housekeeping, Marketing Team
- Deliverable: Nine purpose-built Reports, one for each Zoho Creator Report Type
- Objective of the Reports Suite: Give every stakeholder a report format best suited to their specific decision-making need

4. Report Types Used and Their Mapping

The table below maps every Report Type available in Zoho Creator to a specific report built on the Room_Booking_Form.

Report Type	Report Name	Purpose	Key Configuration
List View	All_Bookings_List	Provides a simple, scrollable list of every booking with key columns for quick browsing and search	Columns: Guest Name, Contact Number, Room Type, Check-In Date, Booking Status; sorted by Check-In Date (ascending)
Spreadsheet View	Bookings_Spreadsheet	Provides an editable, grid-style view for the front office to bulk-update check-in, check-out, and housekeeping status	Inline-editable columns: Check-In Status, Check-Out Status, Housekeeping Status; grouped by Room Type

Report Type	Report Name	Purpose	Key Configuration
Kanban View	Booking_Status_Kanban	Displays bookings as draggable cards grouped by processing stage, so staff can visually track progress	Grouped by Status field: Enquiry / Confirmed / Checked-In / Checked-Out; card shows Guest Name and Room Type
Calendar View	Checkin_Schedule_Calendar	Displays bookings on a calendar based on check-in date, to help the front office plan daily arrivals and room readiness	Based on Check_In_Date; each day cell shows the count of expected arrivals and room type breakdown
Map View	Guest_Origin_Map	Plots guests' permanent addresses on a map, to help marketing understand where the hotel's customer base is coming from	Based on Permanent_Address (geocoded); pins colored by Room Type
Timeline View	Booking_Activity_Timeline	Displays booking submissions along a time axis, to help management track booking momentum across the season	Based on Booking_Submitted_On (from the advanced fields extension) or Check_In_Date; grouped by week, showing cumulative bookings
Pivot Table	RoomType_By_MealPlan_Pivot	Cross-tabulates Room Type against Meal Plan to show which meal plans are most requested per room category	Rows: Room_Type; Columns: Meal_Plan; Values: Count of Bookings
Chart View	RoomType_Popularity_Chart	Visualizes the number of bookings per room type as a bar chart, to help decide inventory allocation and pricing	Chart type: Bar Chart; X-axis: Room_Type; Y-axis: Count of Bookings
Summary View	Guest_Stay_Summary	Groups and summarizes bookings by guest, showing total nights stayed and number of visits for loyalty tracking	Grouped by Guest_Name; Summary columns: Count of Bookings, Sum of Number_Of_Guests

5. Report Configuration Details (Report-wise)

All_Bookings_List (List View)

- Default landing report for the front office manager, showing every booking in a flat, searchable list.
- Includes a search bar and column-level filters for Room Type, Booking Status, and Check-In Date.

Bookings_Spreadsheet (Spreadsheet View)

- Used daily by front-office staff to update check-in, check-out, and housekeeping status in bulk.
- Only Check-In Status, Check-Out Status, and Housekeeping Status columns are editable; all other columns are read-only.

Booking_Status_Kanban (Kanban View)

- Used by the front office to visually track how bookings move from Enquiry to Checked-Out.
- Staff drag a booking's card across columns as its status changes, updating the underlying Status field automatically.

Checkin_Schedule_Calendar (Calendar View)

- Used by the front office and housekeeping to plan how many rooms need to be ready on a given day.
- Clicking a date drills down into the list of guests arriving that day.

Guest_Origin_Map (Map View)

- Used by the marketing team to identify which cities or regions the hotel's guests are traveling from.
- Helps target regional advertising campaigns and travel-partner tie-ups.

Booking_Activity_Timeline (Timeline View)

- Used by management to monitor booking momentum leading into peak and off-peak seasons.
- Helps decide when to launch early-bird offers if bookings are trending low.

RoomType_By_MealPlan_Pivot (Pivot Table)

- Used by the F&B and front office teams to forecast meal preparation quantities per room type.
- Supports decisions on bundling meal plans with specific room categories.

RoomType_Popularity_Chart (Chart View)

- Used in weekly review meetings to visually compare which room types are most in demand.
- Directly informs dynamic pricing and renovation-priority decisions.

Guest_Stay_Summary (Summary View)

- Used by the manager to identify repeat guests for loyalty recognition and personalized offers.
- Summary totals feed into the hotel's guest-relationship and CRM follow-up process.

6. Validation & Configuration Rules

- List View (All_Bookings_List): default sort by Check-In Date, ascending, so the nearest arrivals appear first.
- Spreadsheet View (Bookings_Spreadsheet): edit permissions restricted to the Front Office role; all other fields locked.
- Kanban View (Booking_Status_Kanban): card movement between columns triggers an automatic update to the Status field with a timestamp.
- Calendar View (Checkin_Schedule_Calendar): dates are limited to the current and upcoming month for operational relevance.
- Map View (Guest_Origin_Map): requires the Permanent Address field to be geocode-enabled for accurate pin placement.
- Timeline View (Booking_Activity_Timeline): data refreshes daily to reflect the latest booking trend.
- Pivot Table (RoomType_By_MealPlan_Pivot): blank cells are displayed as zero rather than being left empty, to avoid ambiguity.
- Chart View (RoomType_Popularity_Chart): chart is set to auto-refresh whenever a new booking is submitted.
- Summary View (Guest_Stay_Summary): grouping is case-insensitive and trimmed to avoid duplicate guest entries due to inconsistent spelling.

7. Workflow Summary

- Step 1: Guests submit bookings through the Room_Booking_Form as covered in the base use case.
- Step 2: The front office manager monitors incoming bookings using the All_Bookings_List and the Booking_Activity_Timeline.
- Step 3: As confirmations and check-ins happen, staff track progress visually using the Booking_Status_Kanban.
- Step 4: Housekeeping uses the Checkin_Schedule_Calendar to plan which rooms must be turned over on which day.
- Step 5: Marketing uses the Guest_Origin_Map and Guest_Stay_Summary to plan regional campaigns and loyalty outreach.
- Step 6: Management reviews the RoomType_By_MealPlan_Pivot and RoomType_Popularity_Chart in weekly meetings to adjust pricing and packages.
- Step 7: On a daily basis, front-office staff use the Bookings_Spreadsheet to record check-in, check-out, and housekeeping status in bulk.

8. Expected Learning Outcomes

- Understand the purpose and correct use case for each Report Type in Zoho Creator.
- Learn how to choose the right report type based on the stakeholder's decision-making need rather than default to a single list view.
- Practice configuring grouping, sorting, and summary logic across different report types on the same underlying form.
- Understand how visual reports (Kanban, Calendar, Map, Chart, Timeline) support faster operational decisions than raw tabular data.
- Understand how Pivot Tables and Summary Views support planning and resource-allocation decisions.

9. Deliverable for This Lab Exercise

Students must build all nine reports on the existing Room_Booking_Form in Zoho Creator exactly as specified above, configure the listed grouping and validation rules, and submit a screenshot-based lab record showing: (a) each of the nine reports in its configured state with sample data, (b) the report type selector in Zoho Creator's Report Builder for each report, and (c) at least one drill-down or interaction (e.g., clicking a calendar date or dragging a Kanban card) demonstrated with before/after screenshots.
